

Janco Logistics and E-commerce Team Achieved New Record of Orders Fulfilled in the Past Singles' Day

20/11/2018

During the peak brought by the past Singles' Day, our Logistics and E-commerce team worked together and fulfilled more than 10,000 orders every day. At the same time, we also fulfilled all orders within the time limit promised to customers (Orders received in the morning will be fulfilled and shipped out in the afternoon). Our clients are highly satisfied with our efficiency and thus our teams are encouraged to do even better in the future.

Our capability to fulfill double amount of orders during the peak with efficiency and time limit target achieved is the result of our investment, training and planning. Our group has been investing in automation machines when cross-border e-commerce businesses begin. In the past 6 months, both of our Logistics and E-commerce team have been training our warehouse staffs to adapt to the operations flow of e-commerce business. On top of that, we also planned our resources and operations flow exclusively for the peak, and all of these factors contribute to our success today.

In the future, our group will continue to search for appropriate machineries for automation and carry out continuous improvement initiatives. We target to increase our efficiency together with our e-commerce business, thus yield a higher profit margin for the group.
